

## Lesson 1: OpenCV – Configuration.

Homepage: [opencv.org](https://opencv.org)

Q&A forum: [answers.opencv.org](https://answers.opencv.org)

Documentation: [docs.opencv.org](https://docs.opencv.org)

### 1. Download and install:

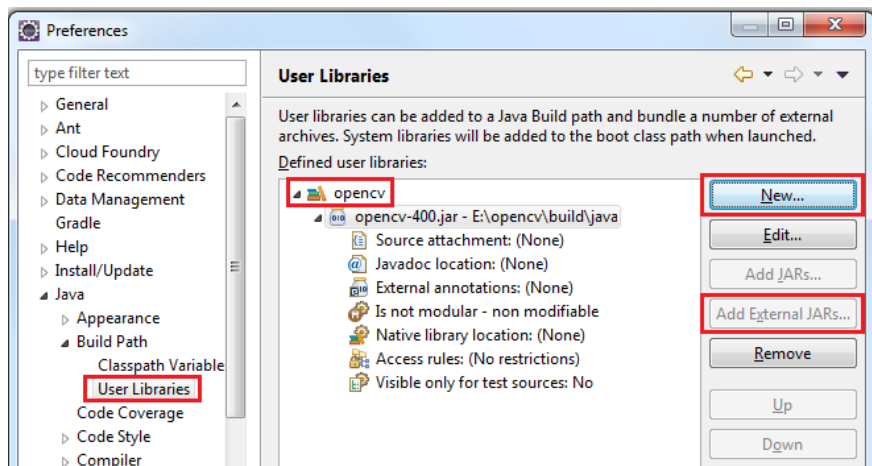

- **JDK** – <https://www.oracle.com/technetwork/java/javase/downloads/index.html>,
- **Eclipse IDE** – <http://www.eclipse.org/downloads/packages/release/2018-09/r/eclipse-ide-java-developer>,
- **OpenCV library** – <https://sourceforge.net/projects/opencvlibrary/>.

### 2. Set up OpenCV for Java in Eclipse:

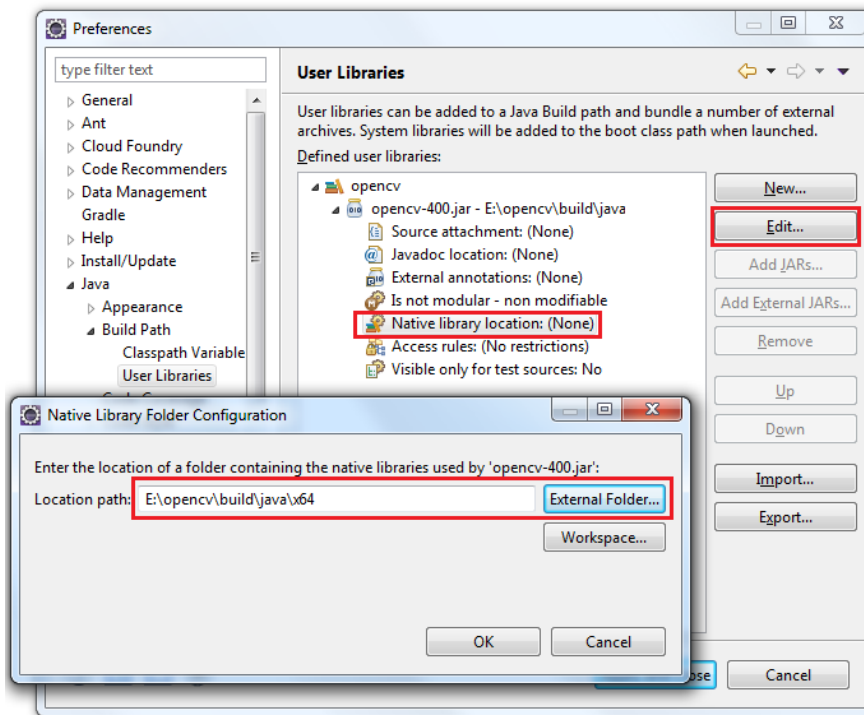

- To create a User Library go to *Window* → *Preferences*:

- Navigate under *Java* → *BuildPath* → *User Libraries* and choose *New*.
- Choose *Add External JARs*, browse to select *opencv-3xx.jar* (located at *\opencv\build\java*).

- Select *Native library location* and press *Edit*.
- Select *External Folder* and browse to select the folder containing the OpenCV libraries (located at \opencv\build\java\x64).

3. Add user library (which contains OpenCV) to your Java Project.

- Go to project properties. Select *Java BuildPath* → *Libraries* → *Add Library*.
- Choose *User Library*, mark your OpenCV library.
